

Here are the Various Artifacts and User-Group Combinations

1. Windows 10 File Manager This PC Desktop

NOTES: 5 Network Locations on 'This PC' Node: Smart TV; Plex Server (192.168.90.170) running on FreeNAS Server (192.168.90.14); LaCie Single Bay NAS with 2 Volumes; D-Link Single Bay NAS with one Volume. I'm able to run backups to either single bay NAS target.

2. Windows File Manager Network View

NOTES: While the single bay NAS devices display their separate share volumes, FreeNAS requests a sign on if selected on this screen, but will not allow a login from any of the users as below (Passwords and credentials on FreeNAS have been checked and double checked).

I am able to connect to FreeNAS shares /Public and /Geoff from another PC running Zorin Ubuntu.

3. FreeNAS Shares Users & Groups

		GROUP				
USER	Home Dir	Admin	Public	geoff	gwhy	sawit
sawit	/Public	✓	✓	✓	✓	✓
administ	/non-exist	✓				
gwhitele	/Public			✓		
geoff	/Geoff	✓	✓	✓		✓
gwhy	/non-exist		✓	✓		✓
